10.1.2 Reverse String

ALGORITHM

Step 1 : Start

Step 2 : Input string and store in user_string

Step 3 : Set result as an empty string

Step 4 : Find length of user_string and store in l

Step 5 : Set i = l - 1

Step 6 : Repeat steps while i is greater than or equal to 0

Step 7 : Get the character at index i from user_string

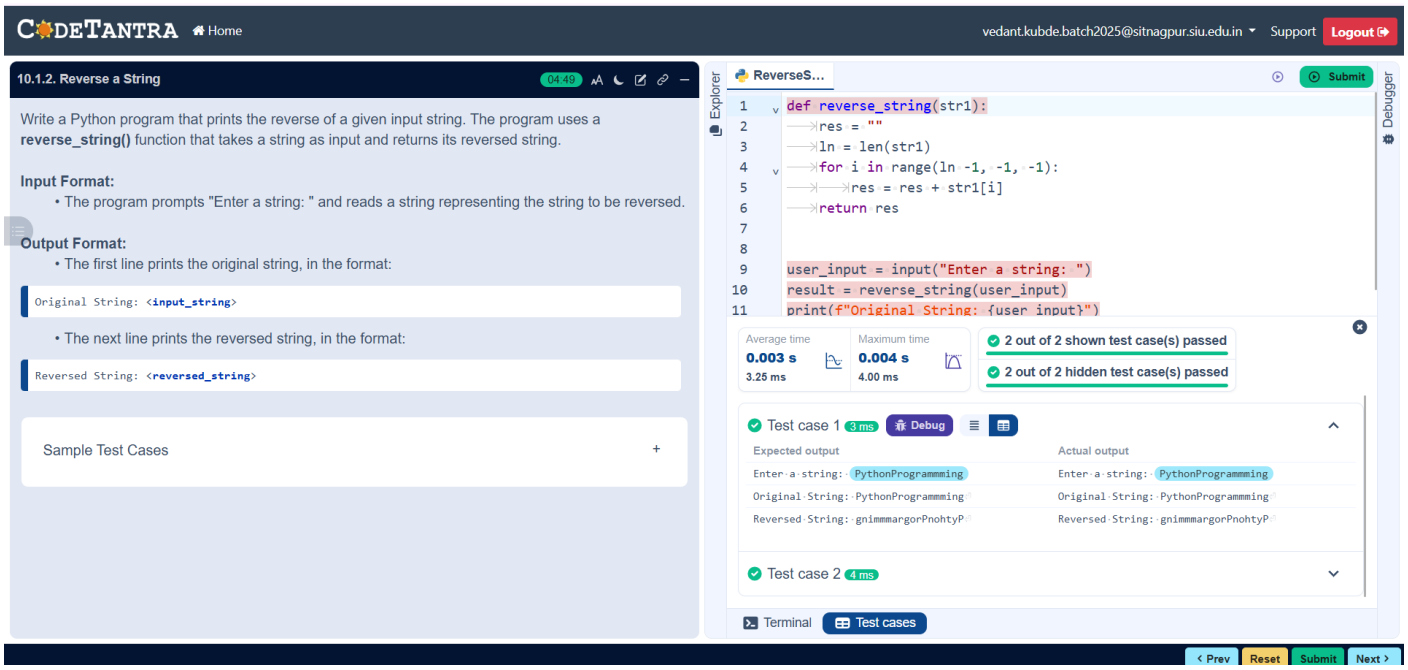
Step 8 : Add the character to result

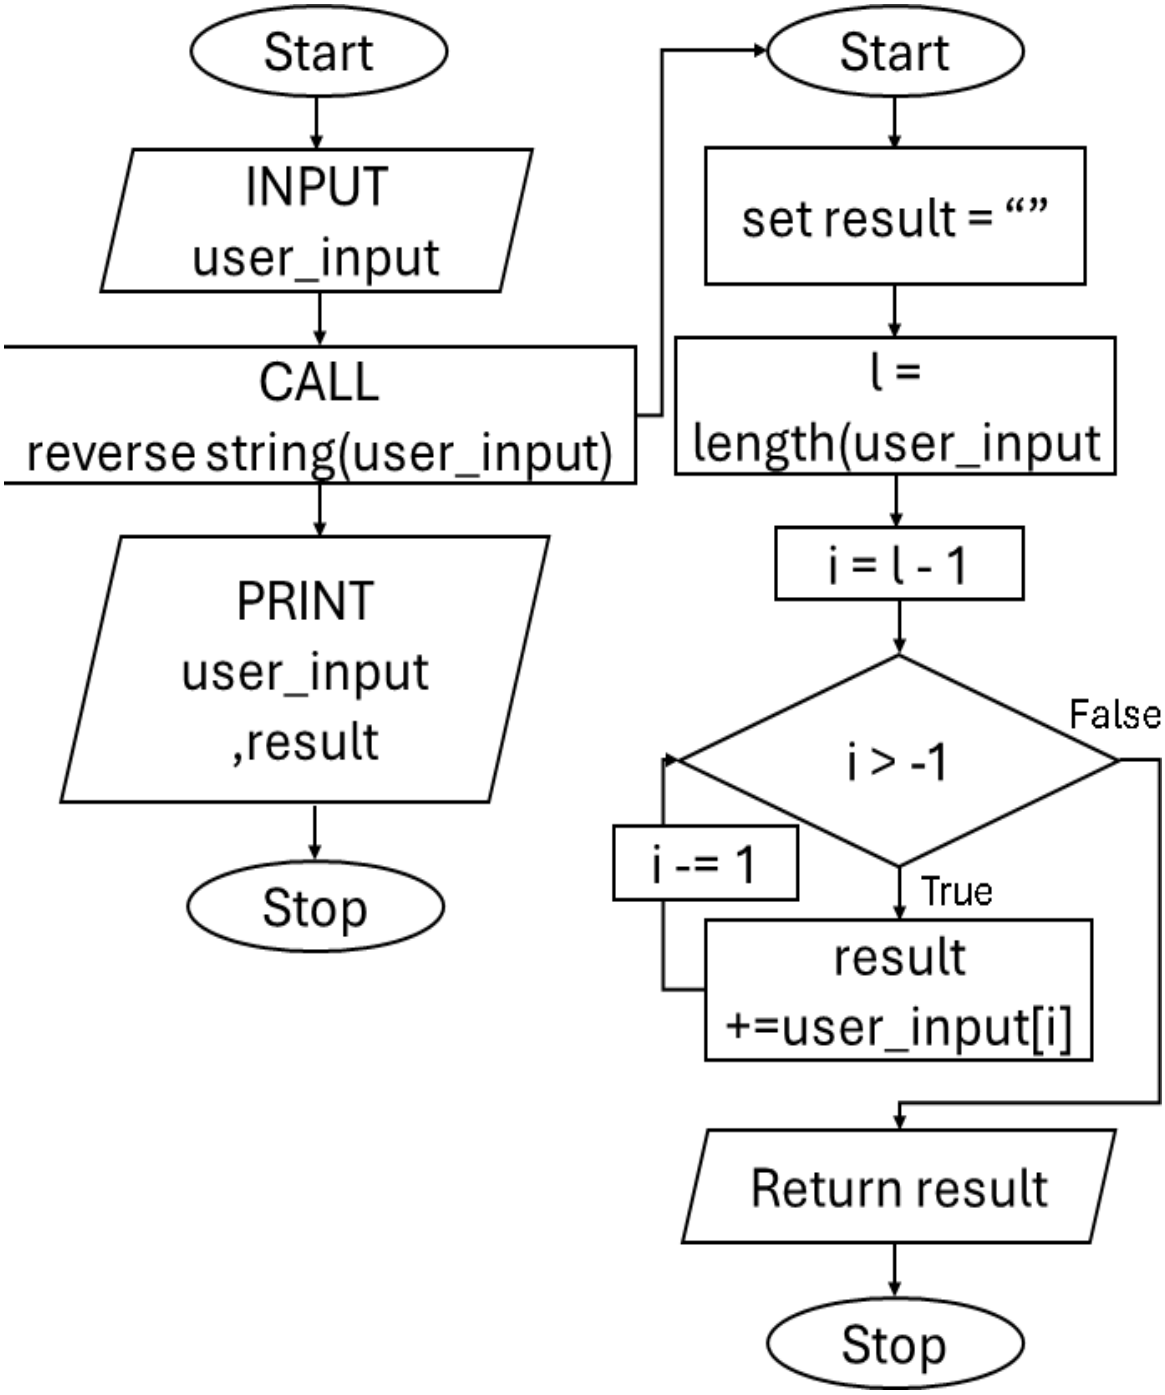
Step 9 : Decrease i by 1

Step 10 : Go back to Step 6

Step 11 : Print result

Step 12 : Stop





Start
INPUT
user_input
CALL
reverse string(user_input)
PRINT
user_input
,result
Stop
Start
set result = “”
l =
length(user_input
i = l - 1
i > -1
False
True
i -= 1
result
+=user_input[i]
Return result
Stop
